

# IMAP Email Setup Guide

<b>Email address:</b>	Full email address
<b>Username:</b>	Full email address
<b>Password:</b>	The password you chose when the mailbox was set up
<b>Account type:</b>	IMAP
<b>Incoming mail server:</b>	imap.stackmail.com.
<b>Outgoing mail server:</b>	smtp.stackmail.com.
<b>Incoming port (IMAP):</b>	993
<b>Encrypted connection:</b>	SSL
<b>Outgoing server port (SMTP):</b>	587
<b>Encrypted connection:</b>	TLS

When setting up your account, please choose More Settings > Outgoing Server and check the box for 'My outgoing server (SMTP) requires authentication'.

If you experience any problems with the connection or receive a certificate warning, please disable SSL/TLS encryption and change the incoming server port to 143.
